

## A new species of Genus *Macrorrhyncha* (Diptera: Keroplatidae) from Bulgaria

Dimitar N. Bechev

Department of Zoology, Plovdiv University, 4000 Plovdiv

Eight species of the genus *Macrorrhyncha* Winnertz are known for the fauna of Palaearctic region (Matile, 1975; Krivosheina, Mamaev,

Figs. 1-4. *Macrorrhyncha*, male genitalia. 1 — *M. veleka* n. sp., ventral view; 2 — *M. veleka*, gonostyle lateral view; 3 — *M. geranias*, ventral view; 4 — *M. geranias*, gonostyle, lateral view

1988). Studying Bulgarian specimens collected in Southeastern Bulgaria, a new unknown species of this genus was discovered. The new species is similar to *Macrorrhyncha geranias* (Loew) from which is distinguished in details the male genital apparatus (Figs 1-4).

*Macrorrhyncha veleka* n. sp.

Male: length of the wing 3,2 mm.

Head: black. Antennae black, with brown pedicel and first flagellar segment. Mouthparts black.

Thorax: pronotum black-brown. Mesoscutum, scutellum and mediotergite black. Pleurae black-brown, except of propleurae bare. Mediotergite bare.

Legs: coxae, femora and tibiae yellow, tarsi yellow-brown. Ration basitarsus I:tibia I=0,8.

Wings: membranae clear, brownish. Costa produced at about 0,3 from the distance between apex of  $R_5$  and  $M_1$ . Sc to the apex indistinct.  $R_4$  ending in C at 0,4 of the distance between apex of  $R_1$  and  $R_5$ . Stem of M almost equal in length with fusion radiomedian. Halteres with black knob.

Abdomen: entirely black, with black hairs. Male genitalia: Figs 1-2.

Female: unknown.

Holotype: male, Bulgaria, Strandzha Mt., Sinemoretz, 21. 6. 1989. (D. Bechev), in author's collection.

*Acknowledgement.* I am very grateful to Dr. H. Schumann (Museum für Naturkunde der Humboldt-Universität — Berlin) for the loan of lectotype of *Macrorrhyncha geranias*.

## Нов вид от род *Macrorrhyncha* (Diptera: Keroplatidae) от България

Димитър Н. Бечев

(Резюме)

При изследването на материали, събрани в Югоизточна България, е установен един нов вид от род *Macrorrhyncha*. Новият вид е подобен на *Macrorrhyncha geranias* (Loew), но се различава от него по детайли на мъжкия генитален апарат.
